

Public Consultation on Risk-based Global Insurance Capital Standard – Format of Consultation Tool

Thank you for your interest in the public consultation on the Risk-based Global Insurance Capital Standard (ICS). This document provides an overview of the ICS consultation tool on the IAIS website, in order to facilitate the collation and organisation of responses by respondents to the ICS Consultation Document which was published on 17 December 2014.

Comments are sought in the consultation tool first by questions, then by sections/sub-sections. One comment box will follow each line, i.e. there will be one box for comments on Question 1, one box for comments on Question 2 etc. Where a Question is broken into multiple sub-questions, a single comment box will follow the whole question (e.g. comments on Question 50 (a) and (b) will be sought in a single comment box). In such cases, please identify your comments on each sub-question as appropriate. While there is no character limit on the comment boxes, please keep your comments as clear and concise as possible.

If you will be copying and pasting comments into the tool from word-processing software (such as Microsoft Word), please note that formatting (e.g. automated paragraph spacing or bullet points) may not be preserved in the process. It is not possible to attach images or attachments in the tool.

Order of feedback in consultation tool (each line below will be the title of a single comment box):
